## HMM MODEL

### List word to recognition:

- "tôi"
- "dịch"
- "theo"
- "người"
- "bệnh\_nhân"

### Dataset

	toi	dich	nguoi	theo	benh_nhan
Train	36	70	131	82	132
Test	50	50	50	50	50

### Model

For each word, we build a model for it based on the Gaussian Mixture Model HMM model and the number of its phonemes. In details:

```
dict_components = {
    # toi |t|~|o|~|i|
    "toi": 9,
    # dich |d|~|i|~|ch|
    "dich": 9,
    # nguoi |ng|~|uo|~|i|
    "nguoi": 9,
    # theo |th|~|e|~|o|
    "theo": 9,
    # bệnh_nhan |b|~|e|~|nh|~|silent|~|nh|~|a|~|n|
    "benh_nhan": 18,
}

hmm = hmmlearn.hmm.GMMHMM(
    n_components=n,
    n_mix = 4, random_state=10, n_iter=500, verbose=True,
    params='mctw', init_params='mct',
    startprob_prior=startprob,
    transmat_prior=transmat,
)
```

#### 1. "tôi":

+ Trained metrics:

```
hmm.startprob_ = ([0.111 0.111 0.111 0.111 0.111 0.111 0.111 0.111 0.111])
hmm.transmat_ = ([
    [0.863 0.    0.014 0.031 0.014 0.    0.    0.077 0.    ]
    [0.    0.679 0.    0.    0.07 0.057 0.174 0.021 0.    ]
    [0.028 0.    0.822 0.027 0.    0.    0.    0.123 0.    ]
    [0.031 0.    0.    0.884 0.    0.    0.    0.085 0.    ]
    [0.038 0.016 0.021 0.005 0.893 0.    0.    0.027 0.    ]
    [0.    0.    0.    0.    0.    0.852 0.085 0.    0.062]
    [0.    0.    0.    0.    0.013 0.    0.808 0.    0.178]
    [0.009 0.289 0.028 0.019 0.    0.    0.    0.655 0.    ]
